

# Advanced Analytics for Financial Audits with Athena

## Client

A large accounting firm managing diverse financial data faced challenges in conducting efficient audits, detecting anomalies, and ensuring audit accuracy.

## Problem Statement

Managing large amounts of financial data resulted in cumbersome audit processes. This resulted in difficulty detecting anomalies and maintaining audit accuracy, which had a negative impact on operational efficiency and client satisfaction.

## Solution

Implemented Athena for the integration of transactional data, financial statements, and ledger entries. For comprehensive insights and process optimization, we utilized advanced data visualization and predictive analytics as an effective tool.

## Value Delivered

- Improved audit accuracy by **20%** to enhance audit quality
- Reduced audit processing times by **15%**
- Proactive Audit Management to Empowered auditors with real-time insights and predictive analytics
